

Countertop protection KIT

The Emac®'s countertop protection KIT consists of pieces with button shape, made of stainless steel, designed to be installed in countertops as a protector to place hot cookware like pans, pots, grills, etc. avoiding possible damage caused by heat.

The Emac® countertop buttons are a perfect option for all kind of countertops, especially the quartz ones, as they can be damaged by direct heat.

General Features

Material:	Stainless steel
Diameter (a):	25 mm
Height (h):	5 mm

Reference	Color	Packaging
KPROTECENCIM	Natural steel	9 u + fitting template

Applications

El kit de protección de encimeras de Emac® es un kit de 9 botones fabricados en acero inoxidable pensados para colocarse, acorde a la plantilla de colocación suministrada, como protección en encimeras de cocina frente a elementos calientes como sartenes, ollas, etc. Esto es especialmente importante en encimeras de materiales de última tendencia, como el cuarzo, cuya resistencia al calor es limitada.

Materials

The pieces of the countertop protection KIT are made of bright stainless steel grade X6Cr17 according to the NF EN 10088-2 standard. AISI-430 alloy.

Stainless steel is a highly durable and resistant material, with an excellent superficial appearance that does not degrade along the time. This material is non porous, facilitating the hygiene of the installation.

Installation

The countertop protection KIT is easy to install by using adhesives. It is recommendable using the fitting template delivered with the order, as optimizes the installation of the kit for the most common cookware.

Be sure the ambient temperature is higher than 10°C. Remove all dirtiness from the surface and be sure is dry. Place the fitting template on the countertop and fix it in the desired place.

1. Apply a small amount of adhesive, the size of an apple seed, on the center of the holes in the fitting template. Then, place the tactile nails on the holes and put pressure on them to improve the adhesion.
2. Lift the first button to check if it has the correct amount of adhesive. All the lower surface must be covered with adhesive. It is preferable to put more quantity but always taking care that it doesn't overflow..
3. Once is dry you can remove the template. The installation is finished.

To stick the buttons you can use a bicomponent methacrylate adhesive.

Cleaning and maintenance

The countertop protection kit requires little maintenance. It will be enough using water with detergent or a specific neutral cleaner diluted. Steel wool, abrasive cleaners, souring products as well as strong acids (hydrochloric and perchloric), strong bases (caustic soda or ammonia) or carbonated solutions are not recommended
